

VACANCY – Mechanical Engineer

We are seeking an experienced mechanical engineer with demonstrable experience in design of process plants and pipework systems and inter-discipline team working associated with complex process plants.

Candidates should be capable of undertaking mechanical engineering design calculations and be familiar with process design information. A working knowledge of CAD systems is necessary but the successful candidate will not normally be expected to do their own drawing work. It is expected that the candidate will have strong written and verbal communication skills and be self-motivated.

Process design experience and materials handling experience would be a distinct advantage.

Candidates should possess a minimum qualification of HND Mechanical Engineering with demonstrable experience in the waste water or bioenergy industry

The successful candidate will need:

- To provide support and project engineering services to the Lead Engineer (Mechanical) for multi £million food waste and water waste anaerobic digestion projects;
- To oversee plant layouts undertaken by our draughtsmen on SolidWorks, production of P&ID's, plant and valve schedules, specifying and procuring mechanical equipment, followed by occasional factory witness tests and visits to site to verify installation;
- To liaise with suppliers and sub-contractors providing services throughout the project lifecycle;
- To liaise with site during the installation period and preparation of relevant H&S information as well as providing design support.
